LD-LEATHER CARE + IMPREGNATE

- That's how it is done: -

General:

LD-LEATHER CARE + IMPREGNATE ensures an evenly regreasing of smooth leather and suede, reactivates the color and gives the leather a soft, supple feel.

LD-LEATHER CARE + IMPREGNATE can also be sprayed for regreasing purposes (care) and reactivation of colorings.

If the leather is dirty or dusty, we recommend to wipe it using LD LEATHER CLEANER PURE INTENSIVE before applying the care.

Application:

Apply LD-LEATHER CARE + IMPREGNATE evenly with a sponge, cloth or spray gun onto the cleaned leather.

The amount of leather milk that needs to be applied, can not be determined in advance. Apply the product thinly in the beginning and see how much the leather soaks up. If necessary, repeat the application.

The care will be absorbed completely by the leather and returns the leather oils, that have been withdrawn while cleaning with soap and water.

Trial application: Apply LD-EASY STOPPER onto the cracked/leaky surfaces until it is completely assimilated with the rest of the leather. You will receive the best results, if you use your fingers. Let the STOPPER dry.

Storage:

LD-LEATHER CARE + IMPREGNATE is sensitive to frost – store protected to frost – optimum temperatures above 10 degrees C. Shake well before using the product. After usage, close the container well.

Good luck! Your LACKDESIGN-Team.
